Experiment No. 2

Setting up a Zoho Creator account and exploring the platform architecture and interface

Name : Jaiganesh G

Register No. : 240701202

1. AIM

To set up and explore the Zoho Creator platform by creating a sample application, creating forms, reports and a dashboard, and understanding the Develop, Deploy and Manage sections of the platform.

2. SETTING UP ZOHO CREATOR

Zoho Creator was opened using a Zoho account and a new application was created. For this experiment, a simple Corporate Asset Maintenance application was used to store asset and maintenance-related information.

1) Creating the Sample Application

The sample application was created to maintain basic details of company assets and their maintenance activities.

1. Department – Stores department details such as department name, department head and location.
2. Asset Details – Stores information about assets such as asset name, category, purchase cost and status.
3. Technician – Stores technician details such as name, phone number, specialization and availability.
4. Maintenance Request – Records requests raised for repairing or servicing assets.
5. Repair Progress – Keeps track of the progress of maintenance work.

Sample Application: Corporate Asset Maintenance

A. Creating Form

A Form in Zoho Creator is used to collect and store information from users. Different forms can be created depending on the type of information required by the application.

Explanation:

The form provides fields for entering department information. When the user submits the form, the entered information is stored as a record and can be viewed later through reports.

B. Creating Report

A Report is used to display and organize the records submitted through a form. It makes it easier to view and manage the stored information.

For example, the Asset Details Report can display Asset Name, Asset Category, Serial Number, Purchase Date, Warranty Expiry Date and Purchase Cost.

Explanation:

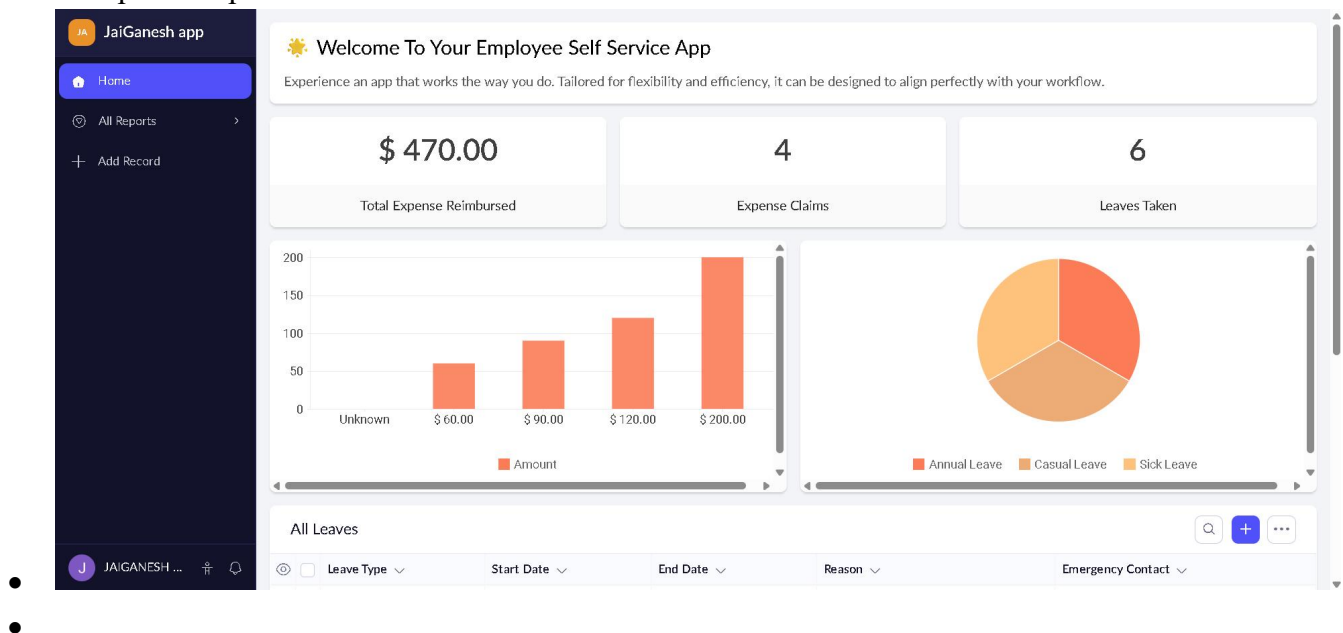

The report displays the records entered through the Asset Details form. It allows users to view the stored records and perform operations such as searching and sorting.

C. Creating Dashboard

A Dashboard provides a quick visual summary of important information in the application. It can contain panels, charts and other components.

The Corporate Asset Dashboard can display information such as:

- Total number of assets
- Total maintenance requests
- Pending maintenance requests
- Completed repairs

Explanation:

The dashboard gives a quick overview of asset and maintenance activities. The displayed information is based on the records stored in the application.

3. EXPLORING THE PLATFORM ARCHITECTURE AND INTERFACE

The main areas of the Zoho Creator interface can be understood as Develop, Deploy and Manage. Each section is used for a different stage of the application lifecycle.

A. Develop

6. The Develop section is used to create and customize applications in Zoho Creator.
7. It allows the creation of forms, reports, pages, workflows and dashboards.
8. Application logic and automation can also be implemented using Deluge scripting.

B. Deploy

9. The Deploy section is used to make the developed application available to users.
10. Applications can be accessed through supported web and mobile interfaces.
11. User access and permissions can be configured according to the requirements of the application.

C. Manage

12. The Manage section is used to maintain and administer the application.
13. It provides options for managing users, permissions, data, settings and integrations.
14. Administrators can monitor the application and modify its configuration when required.

RESULT

Thus, a sample Corporate Asset Maintenance application was created and explored using Zoho Creator. Forms, reports and a dashboard were created to understand the basic working of the platform, and the Develop, Deploy and Manage sections of Zoho Creator were studied.
